MANUFACTURER OF DECORATIVE OVERLAYS & SEALERS

# Concrete Penetrating Sealer A-2250

### Product Description

A- 2250 Concrete Penetrating Sealer is a unique, PERMANENT, one-time application sealant that completely seals, waterproofs, strengthens, cures, dust proofs and preserves most masonry and cementitious surfaces. It penetrates deep and reacts with the free lime and alkali present in concrete, filling the voids and solidifying the masonry into a solid mass. This creates a permanent internal seal that becomes an integral part of the masonry, **not** just a surface coating. A-2250 Concrete Penetrating Sealer protects without changing color, texture or damaging the surface.

### Coverage Rate

A-2250 will cover approximately 200 - 300 square feet per gallon. Coverage rate depends upon the porosity of the substrate it is applied to.

### Primary Uses

A-2250 will make paint last up to 300% longer on concrete or wood. A-2250 permanently waterproofs, hardens and cures most masonry. A-2250 Concrete Penetrating Sealer will lower damage caused by freeze/thaw conditions up to 70%.

### Application

A-2250 is applied using a brush, roller, mop or pump up sprayer. A-2250 protects and prevents moss, mold, mildew, algae and mortar rotting. A-2250 cures newly poured concrete, resisting spot drying and hairline cracking.
