

Americrete Inc

MANUFACTURER OF DECORATIVE OVERLAYS & SEALERS

Asphalt Resurfacer A-650 Black Black with Self Levelers

Product Description

Asphalt Resurfacer is a cementitious product that has a powdered proprietary co-polymer that is easy to install for large projects or small projects. This product is mixed only with water. Asphalt Resurfacer can be used in virtually any climate due to its ability to resist freeze/thaw cycles, and its resistance to salt. Asphalt Resurfacer is designed to overlay asphalt, and it has the ability to dry rapidly. Asphalt Resurfacer is ideal for airports (tarmac, taxiway and runway surfaces), roads, highways and bridges.

Coverage Rate

Asphalt Resurfacer, when applied by squeegee, will receive approximately 70 to 150 square feet per bag, depending upon the application procedures and the current condition of the asphalt to be repaired. Note: Always degrease surface and prime with Americrete Concrete Bonder Admix A-300.

Primary Use, Characteristics and Advantages

Asphalt Resurfacer eliminates asphalt removal, and is a single component mixture (add water only). It has superior bonding capabilities, while maintaining flexibility and weather resistance. Asphalt Resurfacer can be applied from 1/2 inch to a featheredge. Asphalt Resurfacer has been designed for ease of use, dries rapidly and is extremely flexible, skid-resistant, resistant to automotive fluids and petroleum products, coal tar free, non-hazardous and prevents premature surface degradation.

Typical Applications

All asphalt surfaces, roads, bridges, concrete, highways, airports (tarmac, taxiway, and runway areas) and driveways. **Environmentally Friendly.**
